

Bad Essay Example

In todays world, people is always talking about the tecnology and how it make live more easier. But i think many peeple dont realize the danger it have. For example, phones is very distracing, when you try to do study but instead you scroll instagram all day. Its not good for brain becaus it make attention span very short and lazy.

Another thing is that student not learn how to rite proper anymore, because they only text with shortcut like 'u' and 'lol'. This is making them forget how to spell correct word, and teacher get upset. If we continue like this, society gonna be full of bad communication and nobody understand each other.

In conclution, tecnology is sometime good but mostly bad when people dont use it right. We should be more carefull and not always on the phone. Otherwise the future will be more worse and kids dont learn anything useful.
